

Apple Mac Mobile Broadband Settings

These instructions are to be used after the Mobile Broadband device has been installed automatically. This is done normally when first connecting the modem to your computer.

Please note: the SP code for this device is broadband. This code may be requested when the software is first started.

Any questions regarding the setup of the service must be directed to your Internet Service Provider.

1. Open the MBB Application (from the dock, or by going into Finder > Applications and double-clicking on Wireless Broadband.App

Note: in older versions of Mac OSX go to Macintosh HD > Applications > Wireless Broadband.app

2. Click on `Setting...`

3. Click `New` and then type `MBB` under `Profile Name`, type in SPLNS111A1 in the `Access Point Name` section, type in `*99#` in the `Telephone Number` and click `Save` and then `Ok`.

Note: you must create a new profile before deleting the old profile.

4. Select the old profile `Wireless BB` from the `Profile Name` list and click `Delete`.

5. Click `Yes`
